

At page 20, line 1 through line 9, please delete entire paragraph and insert therefor--In the present electronic camera 60 having the above-mentioned structure wherein the present variation is used, in the state that the electronic flash lid 69 is in the open position shown in Fig. 6, focusing processing by means of either the ranging unit 62 or the contrast detector is selected so that the photographing lens 3 is focused in the same way as in the case of the electronic camera 20 of the second embodiment. When the electronic flash lid 69 is in the open position, the electronic flash unit 66 is in a popup state so that a photograph can be taken with flashlight.--

IN THE CLAIMS

At page 25, claim 7, please delete paragraph and insert therefor-- 7. (Amended) A camera comprising:

- a photographing lens barrel arranged at one end of a camera body,
- a grip portion arranged at another end of the camera body and projecting forward from the camera body,
- a projecting portion extending upward from an upper face at a side of the one end of the camera body, at which the photographing lens barrel is arranged,
- an electronic flash unit arranged at the projecting portion, and
- a window for a ranging unit, arranged near a base portion of the photographing lens barrel and on a front face of the projecting portion.--
